TECHNICAL BULLETIN

Moisture Survey Requirements- System Warranties

All projects requesting a Systems Warranty require a moisture survey to identify wet roofing materials that require removal prior to installing the Uniflex Coating System.

Uniflex requires that all moisture surveying be completed by persons qualified and certified to conduct such surveys and that reports are kept on file for the term of the requested warranty.

Uniflex encourages the use of third-parties to conduct such testing and reporting for all system warranty requests but requires it for 15 and 20 year warranty requests.

Uniflex requires a copy of the moisture survey report to be uploaded at the time of project approval. Failure to provide a report may delay project approval or suspend warranty coverage.

Moisture Assessments & Reports must be conducted within the guidelines of the *Standard Practices for Moisture Surveying of Roofing and Waterproofing Systems* and in accordance with the following industry standards:

- C 1153
- ASTM D7954, D7954M
- TAS 126.95
