

HIGH-QUALITY, REFLECTIVE ROOF COATINGS FOR AGRICULTURAL APPLICATIONS.

With a bright-white finish that reduces surface temperatures, while minimizing thermal expansion and contraction, Uniflex® Premium Elastomeric White Finish Coat is formulated using a 100% polymer for superior weathering and reflectivity.

Crack resistant with excellent waterproofing, its reflective properties keep interiors dry while lowering under-the-roof temperatures — keeping cooling costs down and livestock comfortable.

For custom color availability, see the Elastomeric Tint Base data page (41-30D) for more information.
